SKILLS

Programming Languages: JavaScript, Typescript, Python
Front End: ReactJS, Svelte, TailwindCSS, React Query, Zustand, Zod, Jest, React Testing Library
Back End and Database: NextJS, FastAPI, ExpressJS, NestJS, Firebase, MySQL, SQLAlchemy, Redis, Mongoose, MongoDB, Node Cron, SocketIO, Pytest
DevOps and AI tools: Github Actions for CI/CD, Docker, AWS S3 Bucket, AWS Batch, AWS Fragate, Github Copilot, OpenAI API, Claude Code

WORK EXPERIENCE

Captivate Chat AI | *Full Stack & AI Developer (August 2025 – Present)*

- Redesigned how an AI meeting-transcription bot stores recording sessions and transcripts where 2,400+ LoC is refactored from 30+ files that uses Typescript, Express, and MongoDB, in which eliminated 100% of silent transcript loss on bot with migration procedure for production data.
- Developed a RAG-based AI chatbot over the ingestion pipeline using FastAPI, OpenAI API, and MongoDB Vector Search, reaching 80% answer accuracy on every 150-query manual evaluation.
- Built a multi-format document ingestion pipeline that parses PDFs, spreadsheets, and PowerPoint files and extracts embedded figures and tables to persistent storage, achieving 90% capture accuracy across file types using FastAPI, Docling, AWS S3, Batch and Fragate, MongoDB, and OpenAI API.

Boozy.ph | *Junior Full Stack Developer (November 2024 – July 2025)*

- Contributed to the development of internal system to centralize and streamline the management of inventory, product data, orders, and logistics across Shopify, Shopee, Lazada, and Grab platforms using Svelte, Express, Firebase, GCP, and the mentioned external e-commerce APIs.
- Improved marketing agility by reducing promo setup time by 80% by developing an internal system to streamline free gift promos on Shopify using Svelte, NestJS, Docker and Firebase.
- Improved cart performance by 40% by building a responsive cart experience using Shopify's Storefront API, featuring real-time product updates, dynamic pricing, and client-side validation.

MVI Ventures | *Software Engineer (June 2023 – October 2024)*

- Developed 30% of the modules for a B2B logistics system's API using FastAPI, Python, MySQL, SQLAlchemy and Redis, while implementing unit testing with Pytest, and front-end features for a B2B logistics system using NextJS, Ant Design, and Tailwind CSS.
- Implemented Celery, an asynchronous task management tool for Python, to optimize the back-end performance of an e-commerce system, resulting in 80% reduced response times.
- Reduced 70% of the manual operation process by integrating Shopify webhooks for the business logic of the e-commerce system using Shopify API, Google Cloud Platform Pub/Sub, FastAPI, and Python.

Symph | *Developer Intern (January 2023 - April 2023)*

- Developed unit test cases of various software features in the front-end using Jest and React Testing Library from crafted front-end features using ReactJS and AntDesign.
- Led a group of 3 members in ACEZ hackathon resulting in winning and continuing the presented solution as a feature for an existing web application using no-code tools such as OpenAI API, Web flow, Notion and Zapier.

EDUCATION

University of Santo Tomas | *BS Information Systems (2019 - 2023)*

- Led a group of 4 members for the overall technicalities and development of the system: ILABS, a room reservation, equipment borrowing and open laboratory monitoring system for UST CICS.
- Maintained a GPA above 2.75 throughout college to meet eligibility criteria for the CHED Partial scholarship program.
